

VALOR TECHNOLOGIES INDUSTRY SOLUTIONS

DIGITAL COMPLIANCE SOLUTIONS FOR HEALTHCARE

At Valor Technologies, we have a thorough understanding of the strict privacy policies and mandated technology guidelines required for health providers to successfully move into the digital age.

The exchange of patient information between healthcare providers, insurers, patients, and other administrative entities requires regulated security standards. In 1996, the U.S. Government established privacy rules that regulate the disclosure and use of a patient's healthcare information. Don't let these regulations stunt your ability to utilize digital medical records. We can help you meet HIPAA and HITECH compliance standards to take advantage of modern technology and streamline your operations without adding overhead.

IT SOLUTIONS FOR MANUFACTURING COMPANIES

Modern manufacturers must keep their fingers on the pulse of technology.

Technology is now at the heart of most businesses, but for manufacturers it often takes on a special role. Technology touches nearly every part of a manufacturing process, and with the right solutions, any manufacturer can significantly accelerate productivity, streamline production, and see the type of uptime and efficiency your organization needs to get your business where you want to go.

At Valor Technologies, we understand what technology solutions can mean to a growing manufacturer. We also understand that the deployment and management of that technology can be tricky with so many moving parts. Our

technicians take pride in our vast knowledge base that can present a growing manufacturer the tools they are looking for to manage and protect their investments.

TECHNOLOGY FOR THE CLASSROOM

Utilize today's greatest technology solutions to educate the professionals of tomorrow.

The use of technology in education keeps improving every year. The more that educators depend on technology solutions to provide their students with a quality education, the more cost-effective support they will need. At Valor Technologies, we understand that every academic institution has unique challenges they face to provide their students with an education that they can use to be productive members of society. With all types of hardware, software, networking, and other IT-related products, as well as our knowledgeable IT professionals, Valor Technologies is your one-stop shop for your educational technology needs.

IT FOR ENGINEERS AND ARCHITECTS

Professional IT management for those who invest, design, build, and maintain our infrastructure.

Valor Technologies is proud to provide our clients with comprehensive managed IT services. For architects and engineers, leveraging today's most robust technologies is now a need more than a luxury. The industry has come a long way from relying on T-squares. As a result, Valor Technologies delivers technology solutions and support that allow today's architects and engineers to build the infrastructure we all rely on.
